Enabling Your IT Infrastructure for the Future, Everywhere

Gartner IT Infrastructure, Operations & Cloud Strategies Conference
gtnr.it/euiolearnmore

Look inside for the full agenda
helping you move your key initiatives forward
“This conference has given me good input to take back to the organization to develop a more holistic strategy plan for future transformations.”

Head of Windows Competence Centre, SAAB AB

Validate your current strategy and determine next steps for your I&O success.

Digital transformation is steering in a new era of hybrid IT — a combination of public and private cloud that enables speed, agility and resilience. Maintaining existing infrastructures while navigating a wave of technologies and business requirements brings challenges and complexities, many of which demand new skills and a new organizational culture.

Gartner IT Infrastructure, Operations & Cloud Strategies Conference is Europe’s most important gathering of I&O leaders looking to prepare their organizations for the rapid developments impacting the evolution of IT infrastructure and operations.

Join us to benefit from:

A research-led agenda focused on top infrastructure and operation priorities — Gain insight into the current and most impactful business and market trends needed for your organization’s key initiatives

Best practices, skills and tools required to lead your organization through digital business transformation — Discover the technology trends affecting I&O

One-on-One with a Gartner expert to translate research into an action plan for your specific mission-critical priorities

Prioritize what you need to address now and have to prepare for next in your I&O strategy

Cut through the hype around DevOps and learn how to scale it

Learn how cloud and edge will transform your organization

Agenda Tracks

A Cloud & Infrastructure Delivery Strategies: Enabling Your Agile Business

The traditional data center and its services have given way to a hybrid mix of on-premises, edge-based, colocated and cloud-based services. Modern IT infrastructure can, and will, be distributed to wherever it is needed to support specific workload types and, as cloud computing enters its second decade, enterprise IT has embraced the concept of multi-cloud as an accepted delivery model for enterprise applications. This track explores the methods and options available today for developing a successful hybrid cloud strategy, deploying workloads and creating an agile enterprise.

B Emerging Technologies: Cutting Through the Hype

Dramatically expanding digital business requirements continue to highlight the perennial problem within most I&O organizations — how to support ever-growing infrastructure and operations demands while still taking advantage of new trends and technologies that could significantly benefit IT and the business. I&O leaders must be willing to embark on “creative destruction” — fundamentally rethinking the technology architecture, processes and people required for next-generation workloads, including IoT, Endpoint and Edge environments. This track will enable you to evaluate the balance between ensuring operational stability and tapping into emerging trends, enabling you to rethink your approach for next-generation workloads.

C IT Operations Management: Pursuing Operational Excellence

I&O leaders must redefine the mission of IT operations and their service delivery strategies to focus on delivering business outcomes. This change will not be easy; given existing pressures to move faster, while simultaneously running and maintaining the existing IT infrastructure. Automation of repetitive processes will be critical for IT’s success. This track focuses on the processes, automation, technologies and human capabilities required to deliver the desired business outcomes when managing complex environments.

D Evolution of Core Infrastructures: Enhance and Enable Existing Systems

Continuous modernization is required of servers, storage, networks, facilities, and applications. Meanwhile, new business strategies and the proliferation and analysis of data are putting new pressures on IT infrastructure. This track will focus on how to support traditional infrastructures as you acknowledge the need to simultaneously implement an agile approach.

E Leading the Evolution of I&O: Enable the business and Transform your Teams for the Future

Enterprises are rapidly becoming digital businesses — connecting people, businesses and things to increase revenue, efficiency and time to market. However, implementing new technologies, using existing approaches, in support of these initiatives will not be sufficient. Cultivating an IT culture that can adapt quickly to support the business and new technology trends is a critical requirement. This track helps I&O leaders understand how to optimize existing resources and drive cultural change within teams while expanding and transforming I&O’s value proposition in the long term.

“For the most up to date information about the agenda, speakers and sessions please visit our website: gtnr.it/euiolearnmore”
