Gartner for Supply Chain

Supply Chain Top 25 for 2022

26-50 Rankings and Industry Leaders
Superior supply chains deliver on the business’s purpose

They don’t just push products; they understand customer value, invest in demand management and promote innovation against environmental, social and governance (ESG) initiatives. The Gartner Supply Chain Top 25 is a renowned annual ranking of the world’s superior supply chains. From financial and corporate social responsibility data and community opinion, we identify, celebrate and profile companies demonstrating excellence in supply chain management. Clients use the peer benchmarks to make the business case for supply chain transformation and the best practices to accelerate supply chain performance.
Key Trends Among This Year’s Supply Chain Leaders

CSCO as Chief Ecosystem Officer

Today’s supply chain leaders own both traditional functions like planning, sourcing, manufacturing and logistics, as well as adjacencies like risk management, corporate quality, customer service/experience, new product introduction, technology and ESG.

Success in this expanded role depends on adaptability, agility and resilience, as well as leaders forming coopetition-based ecosystems.

Self-Stabilizing Supply Chains

Supply chain organizations must rewire themselves to withstand the constant barrage of disruptions — e.g., dynamically flex resources; establish greater visibility and resilience in supply networks; apply adaptive funding techniques; and formalize agile governance processes.

The combination of these approaches enables supply chain leaders to stabilize more quickly from any external shock.

Progress on Broader Sustainability Agenda

Many companies have issued ambitious goals for net-zero environmental impacts and are holding internal and external partners accountable through circular economy models and other techniques.

Another key pillar of the ESG agenda is diversity, equity and inclusion (DEI). Leaders in this area have formalized processes and accountability measures to ensure representation and pay equity.

Human-Centric Digital Automation

CSCOs continue to prioritize digital capabilities. But with the labor market for digital talent so hot, they must balance long-term investment in automation with implementing advanced analytics and data-driven technologies now.

Leading CSCOs are active in the development of analytical and technical skills across supply chain and IT in support of the broader digital transformation roadmap.
